To-cook-or-not-to-cook

USER STORY:
- As a user deciding what to eat, they pull up our webpage.
- When a user is presented with the page, it is populated with suggested recipes and local restaurants through API requests.
- If a user has any Allergies or Dietary restrictions they can select accordingly via a dropdown menu.
- A User has the ability to search for different Recipes or restaurants via the search bar.
- A User can save there favorite recipe via client-side storage in an external HTML page
- A User can input there own recipe in the external HTML page and save it as a favorites
- A user can add, change, or delete anything in they're favorites recipe.

CRETERIAS:
- Use a CSS framework other than Bootstrap.
- Be deployed to GitHub Pages.
- Be interactive (i.e., accept and respond to user input).
- Use at least two [server-side APIs] Spoonacular/ Google Places.
- Does not use alerts, confirms, or prompts (use modals).
- Use client-side storage to store persistent data.
- Be responsive.
- Have a polished UI.

Call-2-Connect

USER STORY:
- AS a user, when i need help making a phone call as somebody who has telephobia
- THEN they'll navigate to the Connect-2-Caller Application.
- THEN the user can create an account or login
- THEN the user can make a post about the prospective phone call they need help making.
- THEN a fellow user can find the post and respond if they can help.
- THEN the users can commuicate to plan the call.
- THEN the users can leave a review or a positive comment about the experience.

CRETERIAS:
- Use React for the front end.
- Use GraphQL with a Node.js and Express.js server.
- Use MongoDB and the Mongoose ODM for the database
- Use queries and mutations for retrieving, adding, updating, and deleting data.
- Use a polished UI.
- Be deployed using Heroku (with data)
- Be interactive (i.e., accept and respond to user input)
- Include authentication (JWT).
- Protect sensitive API key information on the server.
- Include a high-quality README (with unique name, description, technologies used,
screenshot, and link to deployed application
- Have a clean repository that meets quality coding standards.
- Look professional and be mobile-friendly
B- e responsive.
- Have a polished UI.
